SDF 1.0 (2011 – 2014)

› Goal of SDF:

- › to support dairy farmers in the care of **individual animals**.
- › with the specific goal of a **longer productive stay** at the farm due to **improvement of individual health**.

› To do so want to provide:

- › cow specific work instructions
- › to the farmer
- › based on near real-time analysis models
- › using near real-time sensor data.

› Challenge:

- › make it possible for the whole sector
- › in SDF2 (2015-2017):
 - › more farmers: from 7 to 60 (and prepare for 2500)
 - › more sensor suppliers and more data consumers

Numbers for the Dutch situation:

- 15000+ farmers
- in total more than 1.5 million milk cows
- 20 to 200+ datafields per cow
- many different stakeholders in the chain

Approach *(explained in paper and next slides)*

› 2 design principles

› Be as flexible as possible:

- › Farmer is in control: he decides which sensor devices and analysis models he wants to use and who is allowed to use the data
- › Sensor data is not copied and/or stored centrally,
 - › but remains at the original storage location (e.g. of the device supplier).

› Methodology

- › Convert device centric sensors in *cow centric sensors*;
- › *Decouple* direct link between sensor sources and analyses models, by making a broker which routes data requests towards the correct source(s);
- › *Semantically integrate* sensor data from different sources.

Chain integration

Other data sources

InfoBroker: Open platform for (sensor) data producers and consumers

Real time models (at different organisations)

Cow specific workinstruction (SOP)

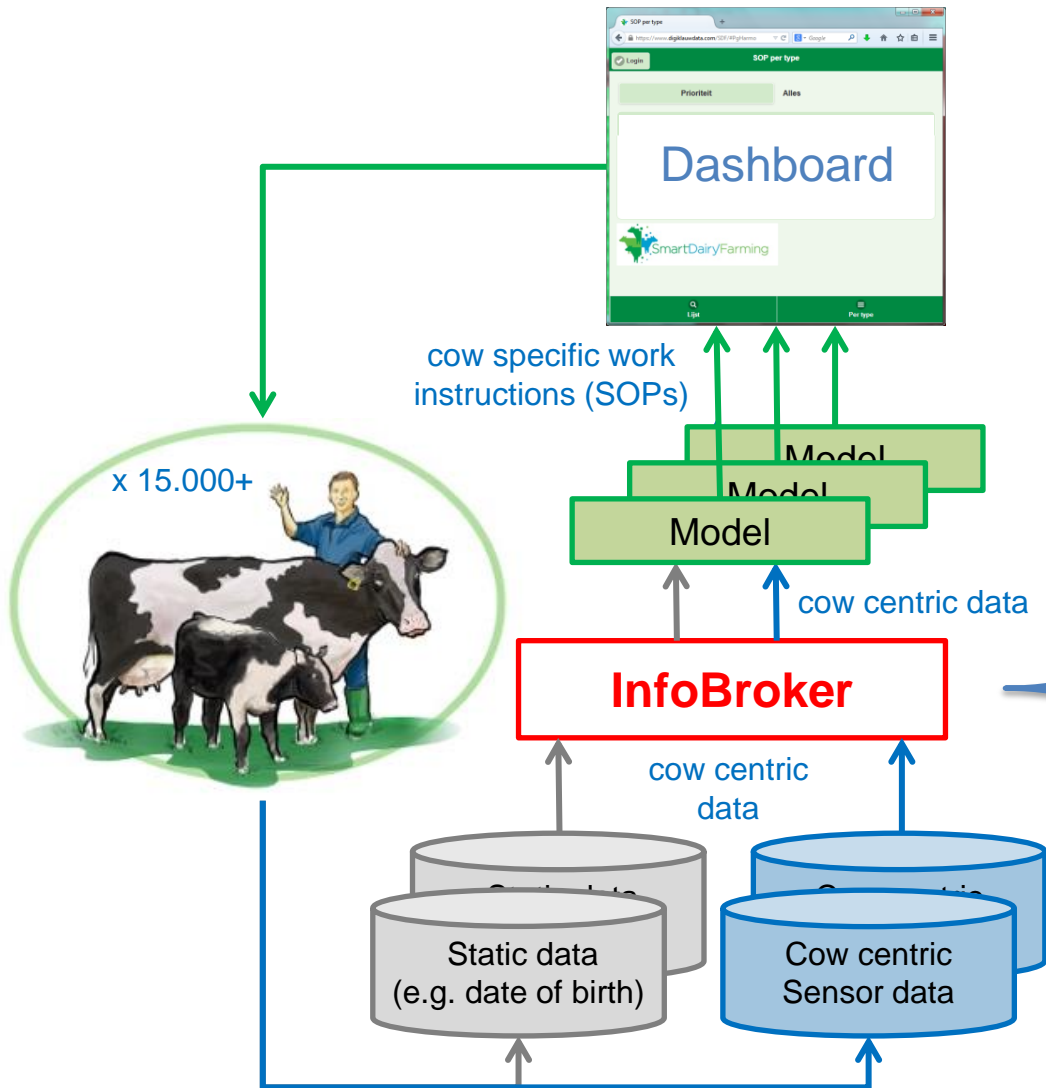

Starting point: Farmer in control "De boer aan het roer"

Starting point: Cow centric thinking

Sensors from different suppliers

Think big, start small

This project is made possible by:

InfoBroker functionalities:

- Open interfaces for data exchange (API)
- Authentication
 - who are you (are you allowed to login)
- Permissions
 - which data may be used by whom
 - to be set by the farmers
- Namingservice
 - location where the data can be found
 - static data
 - cow-centric sensor data
- Integration
 - combining info from different sources
- Pay-per-use
 - fixed costs (connections)
 - variable costs (used data)

So:

- no central datastore for (sensor)data!
- but indeed a broker
- and reduces/prevents duplication

InfoBroker – Facts & Figures

	Farm 1	Farm 2	Farm 3	Farm 4	Farm 5	Farm 6	Farm 7
# cows/calves	459	186	315	239	706	202	351
Behaviour	X				X		
Temperature	X				X		
Activity	X	X	X	X	X	X	
Milk production	X	X			X	X	X
Food intake		X				X	X
Weight	X	X	X	X	X	X	X
Water intake			X	X			
Milk intake			X	X			

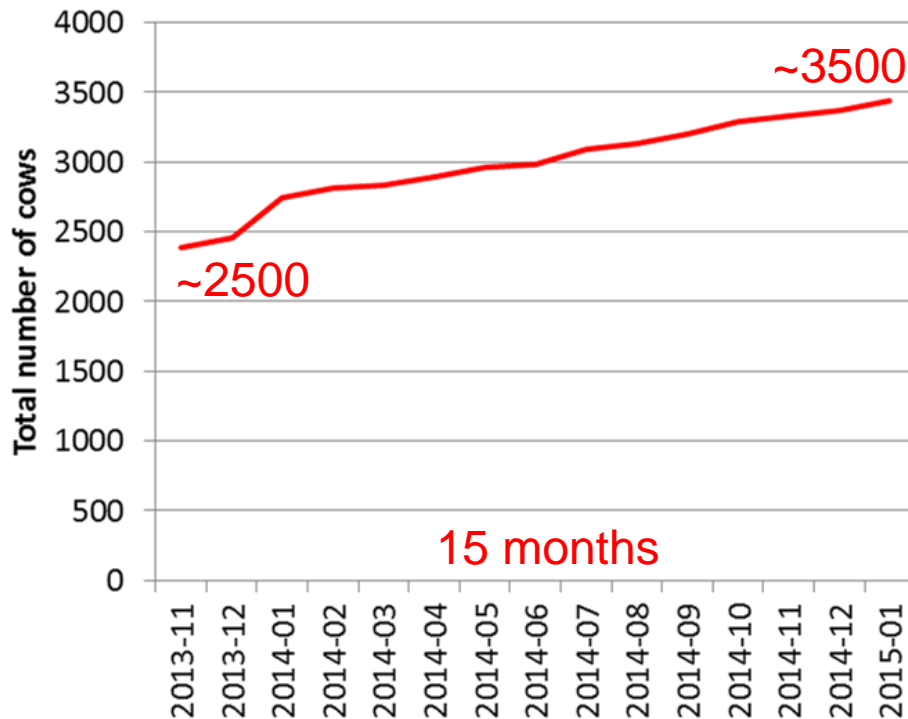

Date: februari 2015

NB1: this are “sensor data categories” at a farm

NB2: not all animals are monitored for SDF (e.g. 3 and 4 only calves)

InfoBroker – Facts & Figures

Number of cows vs time

Number of sensorfields vs time

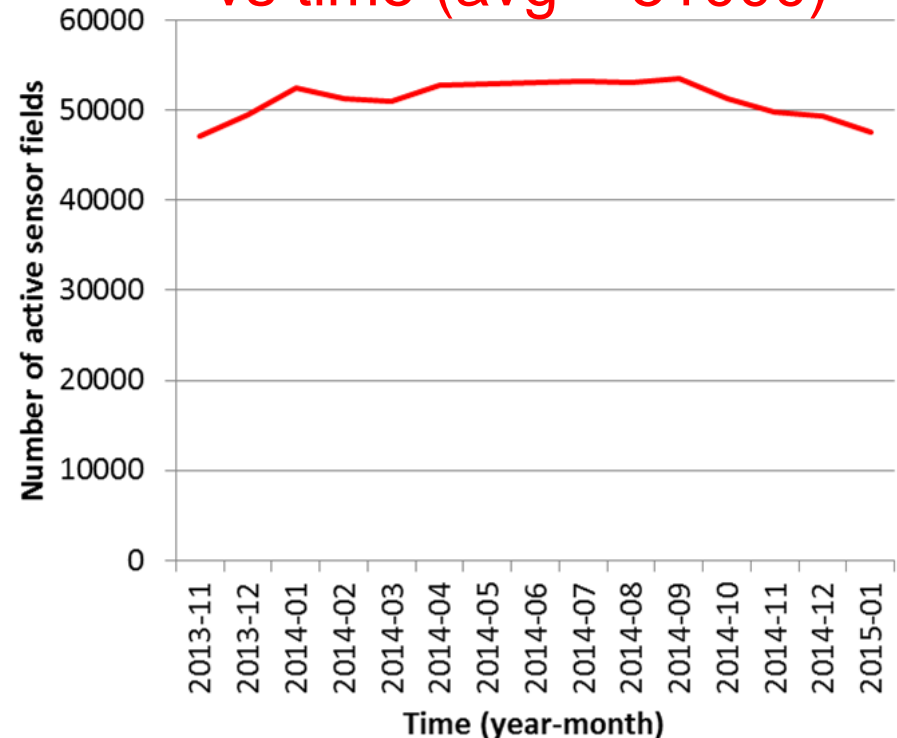

InfoBroker – Facts & Figures

Number of “active” cows vs time (avg = 1800)

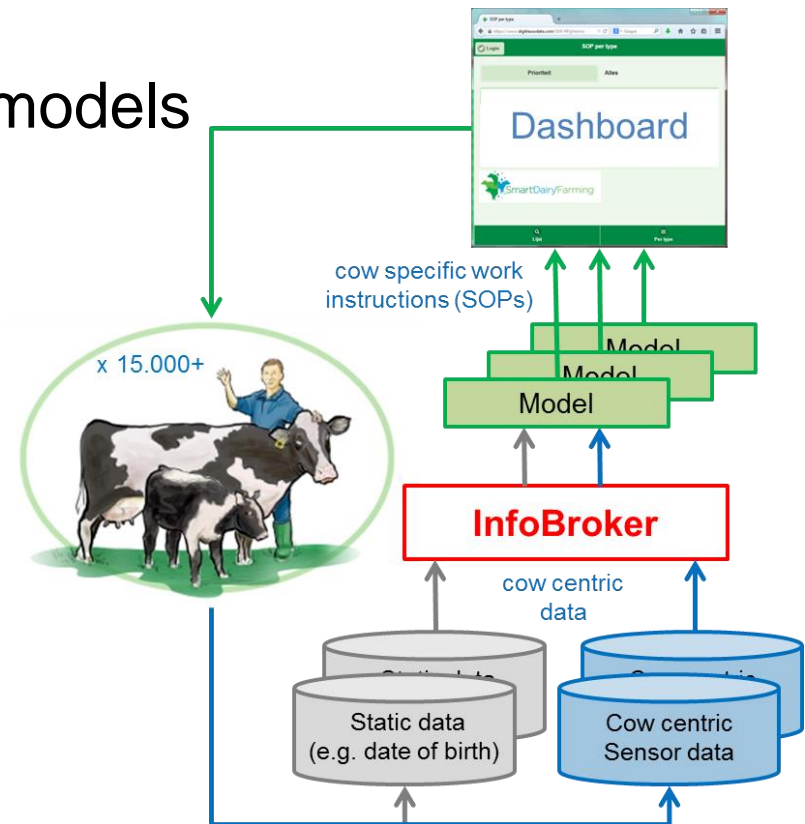

Number of “active” sensorfields vs time (avg = 51000)

“active” = there is data in specific month for cow or sensor
 on average: 28 sensorfields per cow available

Conclusions

- › We developed a platform (architecture, approach and first implementation) for *Near real-time large scale (sensor) data provisioning for PLF.*
- › Used by several near real-time models
 - › to create work instructions (SOP's)
 - › on individual cow level
 - › in the field of
 - › young stock rearing
 - › heat detection
 - › transition.
- › For 7 farmers (in SDF1.0), with
 - › 1800 actively monitored cows
 - › and a history of additional 1700 cows
 - › 51000 active sensor fields
 - › on average: 28 sensor fields per cow

Next steps a.o.

- › **SDF 2.0: “From Proof of Concept to Proof of Practice”**
 - › **More farmers**, more sensors
 - › from 7 to 60 farmers in SDF2 (and be ready for 2500 farmers in 2018)
 - › Additional **InfoBroker functionalities**
 - › e.g. permissions, billing
 - › SDF 2.0 is 1 of the 10 **Fieldlabs** of *Smart Industry (Dutch industry fit for the future)*
 - › vision/lessons learned from SDF in the “Actieagenda” (p.44/45)
 - › see: <http://www.smartindustry.nl/wp-content/uploads/2014/11/Smart-Industry-actieagenda-LR.pdf>
- › TNO is a strategic partner in SDF 2.0
 - › Development of new knowledge:
 - › **IT-perspective**
 - › Data Driven Analysis
 - › Semantic interoperability of sensor data (e.g. Linked Data)
 - › Quality Aware Sensor data Processing
 - › **Economical-perspective**
 - › Value propositions
 - › Distribution of costs and revenues
 - › **Organizational-perspective**
 - › Connection system and behavior
 - › Open innovation and upscaling

Presentation of the “Actieagenda” to minister Kamp (11-11-2014)
