

› **INDOOR CLIMATE LABEL**
B4B WEBINAR | PIET JACOBS & DAVID KEYSON

› CONTENTS

- Why a Indoor Climate Label?
- The development of the label
 - Pilot survey & inspection in FME building
 - Monitoring sampling strategy
 - Pilot continuous monitoring provincial house South Holland
- Data platform:
 - Data Flow
 - Data Privacy and Security
 - Automated data analytics and label generation
- Inspector dashboard and notification B4B research
- Costs

Deze presentatie is uitgevoerd met subsidie van het ministerie van Economische Zaken en Klimaat en het ministerie van Binnenlandse Zaken en Koninkrijksrelaties.

Binnenklimaat Analytics

› WHY?

- A healthy and vital workplace is becoming increasingly important.
- Existing standards are mainly aimed at the design stage and are for a large part of the market not affordable.
- Follow-up Program of requirements Healthy offices (PVE Gezonde kantoren 2018/2021)

Performance requirements for thermal comfort, air quality, lighting and acoustics

Operational label

TVVL Techniekdag 2018

PROGRAMMA VAN EISEN
Gezonde Kantoren 2018
Ontwikkeld door het Platform Gezond Binnenklimaat

Mede mogelijk gemaakt door:

› PROGRAM OF REQUIREMENTS HEALTHY OFFICES 2021

| | D | C | B | A |
|--|--------------------|--------------------|--------------------|--------------------|
| Temperatuur [°C] | < 19 °C > 27 °C | > 19 °C < 27 °C | > 20 °C < 26 °C | > 21 °C < 25 °C |
| CO ₂ [ppm]* | > 1200 | < 1200 | < 900 | < 750 |
| RV [%] | > 70 | < 70 | < 70 | 30 < RV < 70 |
| PM _{2.5} [µg/m ³]** | > 20 | < 20 | < 15 | < 10 |
| PM _{2.5} eis I/O*** | > 1 | < 1 | < 0,5 | < 0,25 |

* uitgaande van buitenconcentratie van 450 ppm

** uurgemiddelde PM_{2.5} concentratie

*** bepaling kan plaatsvinden via het Binnenklimaat Nederland meetprotocol fijnstof bepaling in kantoren gedurende een week

To be met during **95% of the office hours**. Thus excluding public holidays and weeks during which the office is closed, e.g. Christmas holiday.

› INSPECTIE – GEBRUIKERS INTERFACE INSPECTEUR

› INSPECTION FME BUILDING: CLIMATE & ACOUSTICS

Climate score

C

The main risk factors for climate are:

Winter comfort 43%

- Air heating
- Local temperature control not effective
- Insufficient heating capacity

Local thermal comfort 40%

- lack of radiators/convectors under glazing

Acoustics score

C

The main risk factors for sound are:

Use of space / layout 83%

- Large open workspaces
- Insufficient space meeting and room for calling
- Coffee area in open connection with the office

Room acoustics 33%

- little acoustically absorbing material

A Zeer goed **B** Goed **C** Matig **D** Onvoldoende

› INSPECTION FME BUILDING: AIR & LIGHT

Air quality score

B

The main risk factors for air quality are:

Possibilities for ventilative cooling 67%

- Windows can not be fixed in multiple positions
- large open workspaces with openable parts in opposite facades

Outdoor sources 33%

- Air quality affected location

Light score

B

The main risk factors for light are:

Artificial light 25%

- No influence possible

| | | | |
|--------------------|---------------|----------------|----------------------|
| A Zeer goed | B Goed | C Matig | D Onvoldoende |
|--------------------|---------------|----------------|----------------------|

› FME BUILDING: SURVEY & INSPECTION

Survey monitoring inspection

| | Thema | Enquête | Continue monitoring | Inspectie | Thema totaal |
|----------------------------|-------------|----------|---------------------|-----------|----------------------|

| | Licht | B | x | B | B |
| Binnenmilieu totaal | | | | | C |

Reasonable agreement between survey and inspection in FME building

› MONITORING SAMPLING STRATEGY

600 room temperatures, which one to choose?

In limited number of rooms measuring with high quality sensors

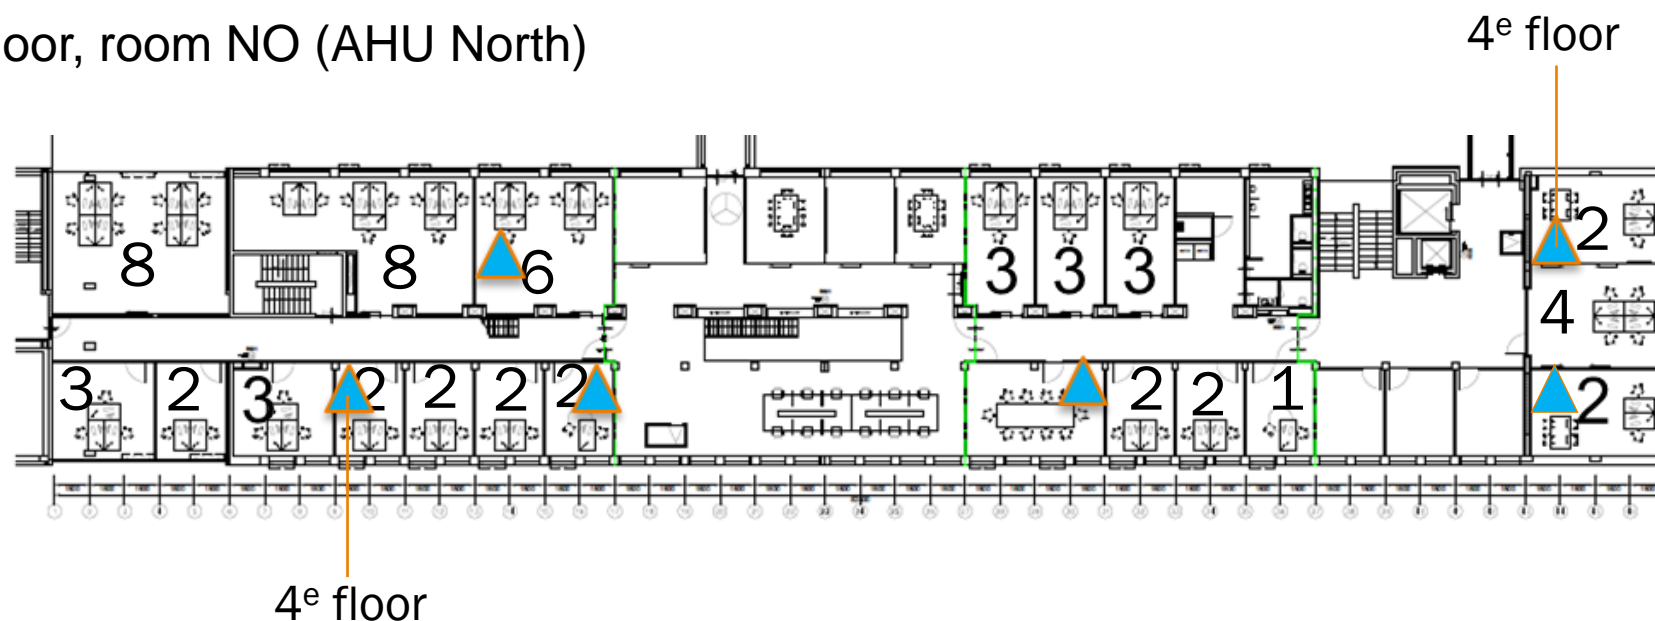

- Minimal 1 room per room type (1-pers, 2-pers, 4-8 pers, office garden, meeting room)
 - # floors: minimal ground floor en top floor
 - Orientation: both south as north side
 - At least 1 room per air handling unit
-
- Make smart combinations, for example: eg north side on ground floor or south side on top floor
 - Involve complaints rooms (survey or inspection) in monitoring
 - Usually 4 – 6 sensor units per office building

FICTIONAL EXAMPLE BUILDING

- › 4 floors
- › Approx. 60 persons per floor
- › Total 200 persons

- › 1: second floor, room SO: two side sun exposed
- › 2: second floor, room N (AHU North), 6 persons
- › 3: second floor South (AHU South), 2 persons
- › 4: second floor 8 persons meeting room (AHU South)
- › 5: fourth floor, room S
- › 6: fourth floor, room NO (AHU North)

› PILOT CONTINUOUS MONITORING PROVINCIAL HOUSE SH

37 measurement locations: April 2019 t/m half Februari 2020

- Temperature
- RH
- CO₂

PM_{2.5} measurement: 3 t/m 10 December 2019 following VLA measurement protocol

PROVINCIEHUIS ZUID-HOLLAND

Limited spread in label between rooms
 → 4 – 6 sensors would be sufficient

| | | |
|-------------------|---|-----------------|
| Temperature | C | } → C (climate) |
| CO ₂ | B | |
| RH | B | |
| PM _{2.5} | A | |
| | | B (air) |

The cause for Temperature class C was
 switching on the heating too late

Class A: Indoor/Outdoor < 0.25

PM2.5 – FINE PARTICULATE ACCORDING TO VLA MEASUREMENT PROTOCOL

› COMPARISON FINE PARTICULATE IN THE OFFICE WITH HOME

WHO has lowered its recommended values in 2021
from 10 to 5 $\mu\text{g}/\text{m}^3$

Outdoor concentration in Den Haag ca. 11 $\mu\text{g}/\text{m}^3$

In office: $0,1871 \times 11 = 2 \mu\text{g}/\text{m}^3$

Average Dutch dwelling: 8 $\mu\text{g}/\text{m}^3$

In office thus healthier than at home, by:

- Good filters
- Sufficient ventilation
- Air tight facade
- Absence of indoor sources

Source: *tki Be Aware*

› B4B RESEARCH: PM2.5 MEASUREMENT LOW COST SENSOR

Datasheet SPS30

Particulate Matter Sensor for Air Quality Monitoring and Control

- Unique long-term stability
- Advanced particle size binning
- Superior precision in mass concentration and number concentration sensing
- Small, ultra-slim package
- Fully calibrated digital output

50 euro

14000 euro

LABEL DATA PLATFORM

Three data elements:

Survey

- Overall satisfaction
- Most important complaints

Continuous monitoring

- Temperature
- Humidity
- CO2
- Particulate matter

Inspection

- Building properties
- Riskfactors

DATA PLATFORM

- Developed to support indoor climate monitoring and automated data analysis and report generation
- A scalable-multi-client platform
- User-centric applications for ease of use
- Built using MongoDB to enable rapid updates

DATA PRIVACY

- Each client has a separate database and can only view their own data with no access to other client data.
- Different user roles and different authorization levels determine access rights.
- Applications are secured with user name and passwords with two-level authentication
- There is no user name coupled to user the comfort survey.
- No data analysis, data piping, or data storage through third parties outside the Virtual Private Server in Amsterdam where the platform runs.
- Private LoRa Server on VPS Amsterdam
- Agreement based on General Data Protection Regulation (GDPR) with each client (“data verwerking overeenkomst”)

DATA SECURITY

- › Access to the data base is secured via SSH (Secure Shell) key and to which a valid IP address is assigned. Access via other IP addresses is not granted.
- › Each building is equipped with a private 4-g router and private LoRa-communication gateway, coupled to the VPS server in Amsterdam.
- › The connection between the client and VPS server over the Internet is secured via a SSL/TLS certificate.
- › There is brute-force policy in place such that client accounts are temporally blocked when multiple invalid access attempts occur.
- › User applications are protected from external access via the issuing temporary access tokens.

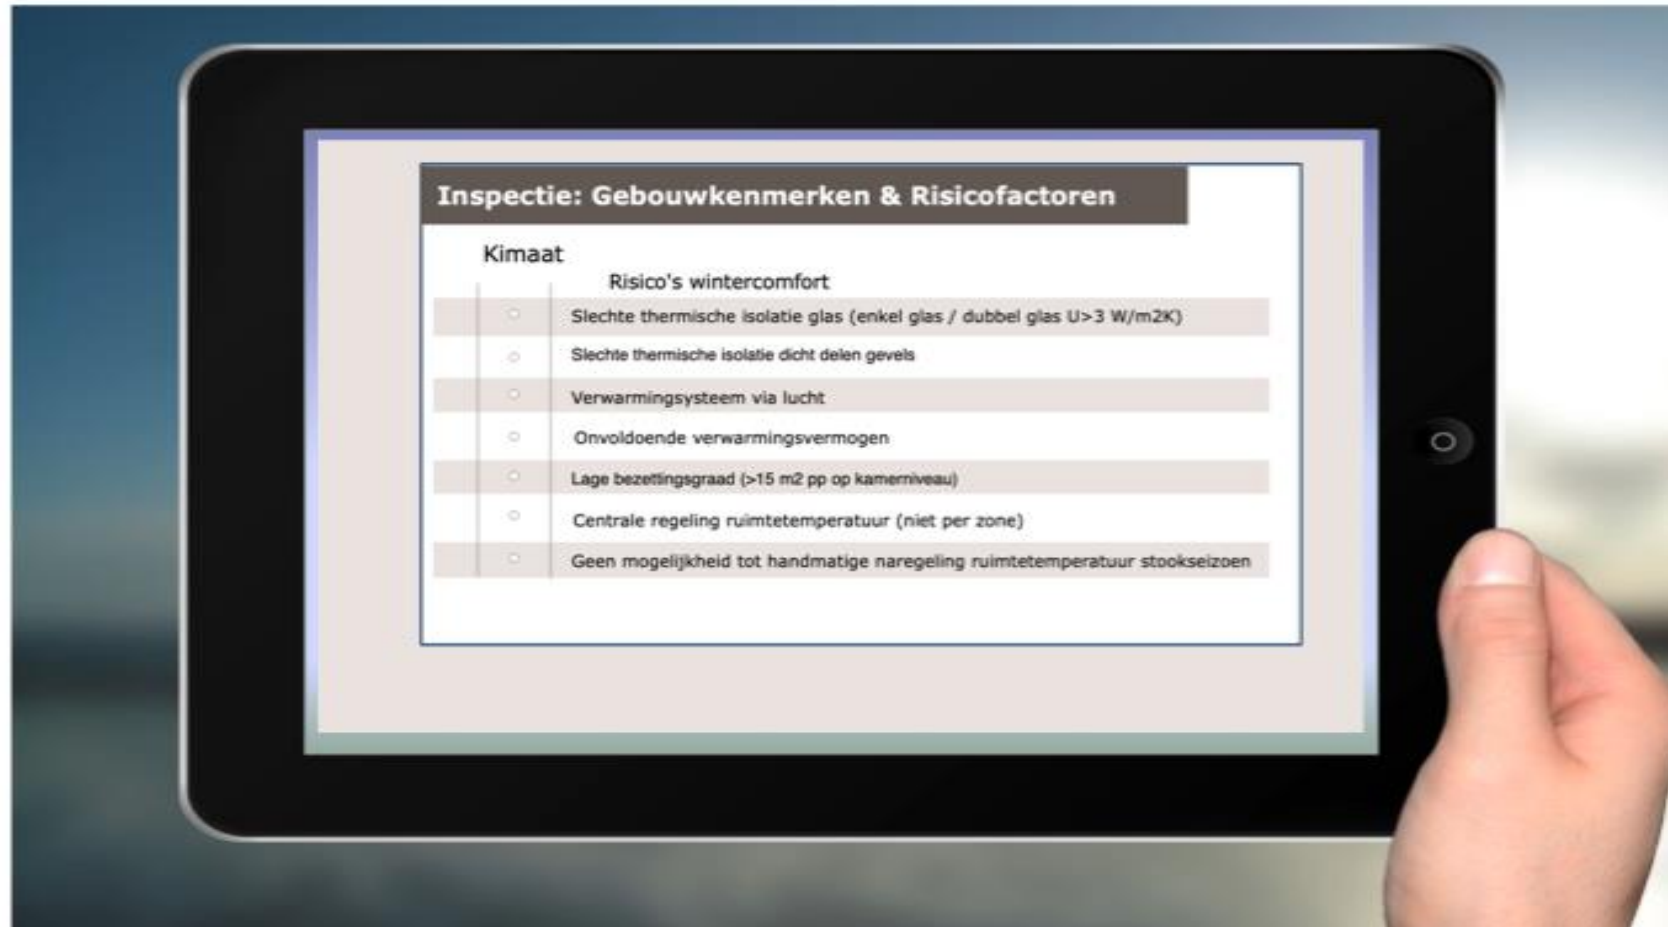

OPTIONAL PATHS FOR SENSOR DATA COLLECTION

- Stored data transferred via secure link (CSV, JSON)
- Stored data transferred via secure link (CSV, JSON) + PM2.5 measurement
- API to collect live data using client sensors
- Standard sensor kit and gateway deployed with installation app

Indoor air monitoring: CO₂ & Fine Particles (PM_{2.5})
Climate Monitoring: Humidity & Temp

› RESEARCH IN B4B: SMART NOTIFICATION STRATEGY

Based on
2000 hours of opening time for an average building, 5% =
100 hours

At the end of each week (40 hours) an analysis of scores compared to the beginning of continuous monitoring period is made. First period, initial goal set by inspector. Given a change in score for sensor climate, subjective comfort or inspection scores, a push notification is sent to the inspector or concerned individual.

The user-centric Dashboard can then be used to investigate why the current score has changed.

B4B Scoring Dashboard
